

The SOUTHERN JAUNT. Spelling out to southern climes they ride In social chat, how will the rabble stare, Each rustic with his mouth expanded wide To see the golden coach a light for hire...

FROM AN ENGLISH PAPER. A CORRESPONDENT who has made a tour of the trees in Cumberland, informs us there is growing, in the vicinity of Cocker-mouth, a large yew tree, whose branches, though exceeding bulky, and in a circular form, cover 559 square yards of ground...

COMMONWEALTH OF MASSACHUSETTS. RESOLVED, That the Treasurer of the Commonwealth, on issuing the precepts on Tax, No. 9, shall furnish each plantation in this Commonwealth, which is taxed, with the laws and resolves of this government, which have not heretofore been furnished therewith.

THAT the Treasury may be enabled to comply with the above Resolve, it is necessary that the plantations in the several parts of the Commonwealth, make return to him of the dates of the last acts and resolves they have received, which he requests may be done as soon as convenient, that they may be furnished with complete sets, to the last session of the Hon. Legislature.

GENERAL ORDERS. For the 4th division, of the Militia of the Commonwealth of Massachusetts.

With heartfelt satisfaction the Major General, takes this opportunity to do justice to the Military exertions and spirit of this division, in every feature of view which has occurred. He shares the officers and soldiers their exertions, their decent and regular conduct, the neatness of their arms, the uniformity & beauty of their accoutrements, and the entire approbation and specific of the numerous spectators. In addition to which his Excellency the Commandant in Chief, has expressed in very lively and pointed terms, the full and complete satisfaction, the meritorious conduct of the militia has afforded him.

Nothing was wanting to complete this scene but an influence of that downy serenity, that last courage of despair, of which man is capable, when his soul has become steeled beneath the torments of injustice. A female negro gave us this example. She was pregnant, and the pains of labour seized her; by a gesture she gave intimation of it to our guards, they removed her from the crowd & placed her on a fall on the after part of the velvet without uttering a single cry, without

Lyman, was President. Eastern Institute 6173, of Capt. Ephraim Chapin's Co. 1st Reg. 111, Higgins, charged with disobedience of orders, in not appearing on the parade with the Company, on the 24th of September, 1796, agreeable to M. Gen. Shepard's, Col. Barr's and his Captain's orders - was tried.

THE COURT after mature deliberation on the evidence adduced in support of the charge and the prisoner's defence, found him guilty. It is adjudged that he be removed from the Militia of this Commonwealth, for the term of fifteen years. The Maj. General approves of the opinion of the Court, and directs that it take place immediately. Col. Barr will cause the vacancy to be filled agreeably to the Militia law, as far as possible. The Court Martial whereof Col. Lyman is President, is dissolved.

The Commanding officers of Regiments, will direct their Captains to make out an accurate statement of their several companies, agreeable to the form given them last year by the Deputy Inspector - this return will be handed to the Adjutant General, at the first session next September. The Independent Companies will likewise give out themselves by this order.

Table with 2 columns: Prizes (1 of 10000 is, 2 of 3200 ap, 3 of 2000, 6 of 1000, 10 of 500, 30 of 100, 90 of 50, 100 of 40, 120 of 30, 150 of 20, 160 of 10, 200 of 5) and Dollars (1000, 6000, 6000, 6000, 6000, 8000, 4500, 4000, 3600, 3200, 2000, 6000, 12000)

By order of the Major General. JOSEPH WILLIAMS, D. A. C. Webbs, May 10, 1797. MANUFACTURE Year annual STATE LOTTERY. CLASS Second. SCHEM of the 2d class of the Semi-annual State Lottery, to commence drawing on or before Thursday the 15th of October next.

Reuben Smith, & Co. A very large and general assortment of Drugs & Medicines, and various kinds of Surgical Instruments, which the gentleman has prepared, Surgical Physicians, and others dealing in the following articles may be offered will be sold as low as can be obtained from any of the States, and almost every species of country produce received in payment.

Patent Medicine, Not adulterated as has been much practiced of late, but genuine from the original Ware Hoopes in England. Painter's Colours. Best Blue white and red Lead, Spanish Brown in Powder, Do. White, Spruce Yellow & Yellow Oaker

Dye Stuffs. Red Wood, Log Wood chipped, Nixeara 1/2 per lb, Wood, Log Wood, Copper, Oil of Turpentine in various quantities, different kinds of Indigo, Black Lead, Put, Crucibles, Spelter, and a great variety of articles in the Brazing line. A number of articles in the Grocery way. A good assortment of Books. Dated with different qualities per ton and less. Different kinds of Writing Paper, per ream of 40.

By Wholesale only. 10 by 5, 6 by 7, 8 by 6 best English crown Winsted, Glaze - 4 1/2 1/2 best London Price. Best Black Ink. Sheet 2 1/2 an excellent quality. Hattford, May 1797.

Vol. V.] THE HAMPSHIRE GAZETTE.

WEDNESDAY, JUNE 29, 1791. NORTHAMPTON, (MASSACHUSETTS) Published by WILLIAM BUTLER.

A true and genuine discovery of Animal Electricity, and Magnetism: Calculated to detect and overthrow all counterfeit descriptions of the same.

THE head-ache is frequently, however, caused by a foul stomach; in that case it will be proper to treat the stomach first, moving the hands up and down, by which the bile will be agitated, and the patients sensibly relieved. When this pain is caused by obstructions in the head, that part must be chiefly treated; and that treatment will most commonly give immediate ease, and help nature to overcome the complaint, as I have experienced.

IN the course of the treatment as directed, should the patient be thrown into a crisis, or state of insensibility, be not discouraged, however terrifying such a state may seem, it is only nature and the disorder in violent conflict, which will very often happen if the blood is out of order. In this case be silent; continue the treatment till the recovery is quite effected, and they are perfectly compeled. You will then, in general, find them to a great measure freed from all those pains and complaints they came to you to be relieved from.

IN order to treat for this complaint, let the patient be placed at a little distance with the ear inclining a small degree towards you; shut the eyes, and the patient, as though you would have your thoughts or spirits sent from the forehead, and the head; move your hands backwards and forwards, pointing towards the part affected. Continue the treatment for some time, and generally good effects will follow.

THE locked jaw is a most dreadful and dangerous complaint, by which many have lost their lives; yet this has been lately removed from a young woman in London, by the treatment when the physician judged her utterly incurable.

Benja. Austin, Jan. David Cobb, Samuel Cooper, George R. Minot, John Kneeland. Boston, April 24, 1791.

IN order to treat a person in this terrible disorder, place the patient before you, and direct your attention to the mouth, as before directed for distemper. Inflammation of the eyes has been frequently treated with success: During the operation, engage your whole attention to the inflammation, and look with all your might to draw out the inflammation. Always keep to this method, as it is much more necessary than the motion of the hands; but I think the treatment is most efficacious when both go together.

THE science is a present both in infancy, and therefore it is not yet retarded to a certainty whether or not it will prove generally efficacious in this; some have been cured and more relieved, but in most instances, as far as I have known, no universal service has been yet done, neither to epileptic nor convulsive fits nor paralytic cases.

Should what has been here offered seem but an idle tale, or a phantom of the brain, to you, let me remember that I am not a physician, but a man of letters, who, by the assistance of God, has been enabled to acquire a very liberal and extensive knowledge of the human mind, and of the nature of the human body, and of the power of the human soul.

Should what has been here offered seem but an idle tale, or a phantom of the brain, to you, let me remember that I am not a physician, but a man of letters, who, by the assistance of God, has been enabled to acquire a very liberal and extensive knowledge of the human mind, and of the nature of the human body, and of the power of the human soul.

But I would recommend all invalids who apply for relief to attend to the following rules. First, to avoid all spirituous liquors. Second, rub themselves well with a very coarse towel, and likewise make use of that exercise to which I have recommended by the late celebrated Dr. Lobb, which is to lift up one hand and one leg alternately, pretty briskly for about half an hour, three or four times a day, which will greatly promote the perspiration, and universally affect the whole habit.

ON A CRISIS. IN the course of the treatment as directed, should the patient be thrown into a crisis, or state of insensibility, be not discouraged, however terrifying such a state may seem, it is only nature and the disorder in violent conflict, which will very often happen if the blood is out of order. In this case be silent; continue the treatment till the recovery is quite effected, and they are perfectly compeled. You will then, in general, find them to a great measure freed from all those pains and complaints they came to you to be relieved from.

IT has been known some put into the most violent agitations, and who continued in the same, apparently in very great agonies for some time, but have come out quietly and free from any disorder, without knowing that they had been in such a state at all. There is an effect very often produced, less perceptible than the crisis, which I have been attending, with very great and good success, called by some a crisis, or a crisis, or a crisis, which causes the mind to be much agitated, without affecting the mental faculties; but I have seen many relieved from their disorders without any of these effects.

IT may be necessary to say something of abstract treatment. This may appear to some incredible; and indeed this part of the science is more difficult to explain, than that which has been already treated of. But whatever considers the nature of the human mind, and the amazing strength of powers of which it is possessed, such as intense thought, reflection, feeling, volition, &c. will necessarily see the vast extent of its power, and will be astonished at the great extent of its power, and will be astonished at the great extent of its power.

A gentleman of undoubted veracity, lately assured me, that he went into the country, having at the same time some patients under his care, and he told them to sit at certain hours, and he treated them, though absent; and they experienced nearly the same effects, as when he was present with them.

DISTANCE is nothing to the mind, and since thoughts in many instances have great influence, why may they not have power over the disorders of abstract persons, as well as those that are present?

IN order to treat absent persons, retire, and let down by yourself for a little time; collect your thoughts, and be as much abstracted as possible. Reflect on the power of God; and on the benefit you wish to do your abstractedly, and on the benefit you wish to do your abstractedly, and on the benefit you wish to do your abstractedly, and on the benefit you wish to do your abstractedly.

Should what has been here offered seem but an idle tale, or a phantom of the brain, to you, let me remember that I am not a physician, but a man of letters, who, by the assistance of God, has been enabled to acquire a very liberal and extensive knowledge of the human mind, and of the nature of the human body, and of the power of the human soul.

From the AMERICAN MERCURY.

THE earthquake which was felt in the evening of the 23d ult. by the best observation I could make, and the exact information I have been able to collect, happened about 16 minutes after 10 o'clock in the place where I was, about 30 miles North of Hartford, in the county of New-Haven, N. E. It was attended by a commotion of fine pieces, observed in different places, was about five miles in a minute, its duration about 31 seconds.

Earthquakes, as well as other phenomena, doubtless proceed from natural causes. They are not, however, on this account, to be left regarded, or viewed as less providential; for all natural creatures are created by the power, and directed by the wisdom of God.

Subterraneous heats, emitted by the nature and fermentation of different minerals, and dispersed in the caverns of earthquakes. These heats rarely expand the air, which being in the bowels of the earth. The air, expanded and laboring for vent, rubbed on with violence and impetuosity, heaving in its progress, the surface of the ground, till it finds or forces an aperture, through which to discharge itself, into the atmosphere, or till by an extensive diffusion, its power is spent, and its terrific effects cease.

The effects of earthquakes, in some instances, are awfully calamitous; yet there is reason to suppose the general design of them is kind and benevolent. They serve their end, in the economy of nature, as well as lightning, winds and storms. The same causes, which produce them, may probably maintain that necessary motion and warmth, which prevent the earth, below the influence of the sun, from congelating into frost, and the springs and streams from hardening into ice. If there were in the earth no lightning, heat and fermentation, what would hinder all its moisture from becoming, and remaining fixed, where the influence of the sun cannot penetrate? In this case the earth must be doomed to perpetual sterility, and devoid of every creature, which is the economy of nature, as well as lightning, winds and storms.

The effect of earthquakes, in some instances, are awfully calamitous; yet there is reason to suppose the general design of them is kind and benevolent. They serve their end, in the economy of nature, as well as lightning, winds and storms. The same causes, which produce them, may probably maintain that necessary motion and warmth, which prevent the earth, below the influence of the sun, from congelating into frost, and the springs and streams from hardening into ice. If there were in the earth no lightning, heat and fermentation, what would hinder all its moisture from becoming, and remaining fixed, where the influence of the sun cannot penetrate? In this case the earth must be doomed to perpetual sterility, and devoid of every creature, which is the economy of nature, as well as lightning, winds and storms.

When cities are shaken into ruin, and the inhabitants buried in their falling houses, or absorbed in the gaping chasms, we are to contemplate such events as the judgments of God; not indred as tokens that the immediate sufferers are sinners above all men; but rather as general warnings and calls to repentance. But from such particular instances to conclude, that all earthquakes, however gentle and innoxious, are signs of divine wrath, would be rash and presumptuous.

He, who has the whole government of the world, in his hand, may, in his wisdom, find it expedient, to accomplish some ends, as his wisdom deems so, which are necessary in its nature, or necessary to its rectitude; but what is the divine hand, may be used for the warning of the creature, or the punishment of the guilty. God, to whom all his works are known from the beginning, and whose eyes pierce to the remotest future, can to adjust causes, that otherwise shall be productive in the exact time, manner and degree that is adapted to the purposes of his government.

Probably some moral end, of all good and useful purposes in the natural world, is to awaken every remaining attention to that Almighty Being, who made and governs the universe. The creation and preservation of the world are indeed higher instances of divine power and government, than any particular changes that take place. To form a world, give it a place and course in the system, and preserve it from dissolution and ruin, is a far more stupendous and glorious work, than barely to furnish it with constant operations, and to superintend its operations, and to superintend its operations, and to superintend its operations.

Should what has been here offered seem but an idle tale, or a phantom of the brain, to you, let me remember that I am not a physician, but a man of letters, who, by the assistance of God, has been enabled to acquire a very liberal and extensive knowledge of the human mind, and of the nature of the human body, and of the power of the human soul.
